Symantec

The Caravel Group partners with Symantec
to defend against cyber threats

Businesses are increasing annual spend on cyber security more than ever before. As threats become more advanced, The Caravel Group (TCG) has introduced multiple layers of threat protection across its operations.

Supporting organisations, governments and people to secure their most important data, TCG partnered with leading cyber security provider, Symantec. A market leader in the field, the business delivers integrated solutions across all end-points, and has strengthened TCG's cloud and infrastructure capabilities, deploying effective, scalable solutions.

"Symantec has a wide range of security products. They are the market leader to provide integrated cyber defence solutions and rapid delivery to the cloud."

- Angad Banga, Chief Operating Officer, The Caravel Group

A strategic partnership

By partnering with Symantec, TCG has accelerated their journey to the cloud with flexible endpoint detection and response (EDR) technology. The results are significant: Incident responders now quickly search, identify, and contain impacted endpoints, both on premises and in the cloud, integrating all incident data and actions into existing SOC infrastructures and Symantec Endpoint Protection (SEP) environments.

With the successful onboarding of Symantec Email Security.cloud products to eradicate the threat of spam, malware, and trojans, its Target Attack Analytics (TAA) and Dynamic Adversary Intelligence has seen the implementation of cloud-based artificial intelligence algorithms and machine learning. This allows TCG to adapt to new attack techniques automatically and gain greater insight into attacker and technique. By increasing visibility, Symantec also delivers great automated playback capabilities to TCG, bringing the skills and best practices of its most experienced security analysts to the table, lowering costs at every opportunity.

A secure solution

Optimising assets and lowering operational costs were the biggest sellers for TCG, where Symantec's technologies were deployed in minutes, with no impact on the end-user experience. "Security solutions from Symantec have changed the way we deal with threats." says Banga. "We are now also implementing Symantec IT Asset Management to centralise all our resources."

Symantec IT Management Suite integrates with SEP Cloud, extending the visibility of endpoints to include modern devices and operating systems. Reducing the cost of managing servers, desktops, laptops and thin clients from a centralised location, the solution reduced end-user downtime and maximised IT efficiency.

Additionally, by ensuring real-time compliance across TCG's IT assets and overall operations, Symantec IT Management Suite centralises and simplifies patch management. Symantec's cloud-enabled management functionality in IT Management Suite puts the security of Windows and Mac users firmly at the forefront, even when they are disconnected from the corporate network. In-depth reports also offer smarter, faster decisions which ensure endpoints are protected.
